ALPHA LIPOIC ACID PLUS

α

A potent antioxidant formula with Alpha Lipoic Acid *plus* Pine Bark extract, Vitamin C and Vitamin E for extra antioxidant protection.

Each capsule contains: Alpha Lipoic Acid 100mg., Vitamin C (Ascorbate Palmitate) 5mg., Vitamin E (Natural E) 20 IU, and Pine Bark Extract 10 mg.

WHAT IS ALPHA LIPOIC ACID (ALA)?

- A naturally occurring co-factor in the body, found most abundantly in red meat.
- It exists in variety of locations in the body: intracellular, extra-cellular and membranes.
- Many individuals have insufficient amounts.
- Its reduced form is Dihyrolipoic Acid (DHLLA), and it is essential for metabolic process of energy (ATP) from food.
- A potent antioxidant that destroys more "free radicals" than other antioxidants.
- A chelator of heavy metal ions, such as copper and iron as well as toxic metal such as cadmium, lead and mercury.
- Lessens oxidative damage caused by radiation exposure, and was used effectively in the former Soviet Union after the Chernobyl incident.
- Being both water and fat-soluble makes it very bioavailable.
- ALA (also known as thioctic acid) increases Glutathione levels in the cells, and enhances the activity of other antioxidants, especially E and C.
- It has had positive effects on many disorders, including diabetes, heart conditions, liver disorders, cataracts, metal poisoning, and radiation damage.

FUNCTIONS:

As a very effective antioxidant, ALA helps prevent the oxidative damage caused by free radicals, which are associated with the process of aging and major health problems, such as heart disease, diabetes, cancer, arthritis, cataracts and asthma.

- **DIABETES**
ALA has been used safely for the treatment of diabetics in Europe for over 30 years in doses of 300-600 mg. daily. Antioxidants such as ALA and Glutathione prevent neuropathies associated with diabetes.
- **CARDIO-VASCULAR**
 - Ischemia-reperfusion injuries, which occur in conditions such as stroke, cardiac arrest and head trauma, result from the release of free radicals during reoxygenation of tissue that has become hypoxic.
 - ALA is efficacious in preventing ischemia-reperfusion injuries, and may be important to patients who have strokes, cardiac infarction, and open heart surgery.
 - ALA provides antioxidant protection against LDL's, helping to prevent fatty deposits on arterial walls.
- **AIDS AND HIV**
 - ALA is effective in its antioxidant action, preventing complications to patients with compromised immune systems, such as AIDS and HIV patients.
 - By enhancing antioxidants Vitamins E and C and producing Glutathione, ALA and DHLLA enhance the immune response of HIV patients who are deficient in most antioxidants.
 - These antioxidants scavenge free radicals that are responsible for inactivating white blood cells necessary as a defense against foreign bodies, may help inhibit replication of the virus and also help block the activation of the virus.

**These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure or prevent any disease.*

- **CATARACTS**
ALA enhances activity of Glutathione, Ascorbate and Vitamin E levels, which have an effect on cataract prevention.
- **STIMULATES MUSCLE STRENGTH AND ENERGY**
ALA may decrease Nitric Oxide release, and enhances the uptake of glucose into the muscle, prevents glycation of proteins, and is essential for ATP production.
- **IMPROVES NERVOUS SYSTEM AND MEMORY**
Alpha Lipoic Acid protects the mitochondria of cells in the brain and nervous system, and it may be involved in nerve regeneration. It reduces the amount of oxidative stress in the brain and may enhance memory and mental function.
- **IMPROVES LONGEVITY BY SLOWING THE AGING PROCESS**
Inhibits oxidation and glycation, which cause the accelerated aging process in skin, blood vessels and connective tissue.
- **LIVER DISORDERS**
Alpha Lipoic Acid protects against liver damage from caffeine and alcohol, and may have beneficial effects on those with Hepatitis C and other liver disorders.

WHAT ARE THE BENEFITS OF ALPHA LIPOIC ACID PLUS?

- Montiff uses the highest quality ingredients and includes desiccant pads to insure freshness.
- **Alpha Lipoic Acid Plus** combines ALA with other antioxidants (vitamins C, E and Pine bark extract) to potentiate its effectiveness.
- Pine bark extract is an antioxidant that helps prevent nitric oxide deficiencies.
- **Alpha Lipoic Acid Plus** is easily absorbed and readily bioavailable.

SAFETY

Alpha Lipoic Acid has been safely used for over 30 years in Europe in doses of 300-600mg., with no significant adverse effects. With individuals who are thiamin deficient, such as alcoholics, thiamin (B-1) supplements may be advised. Since no studies have been reported on pregnant women, it is not recommended for them.

DIRECTIONS: Take 1-3 capsules per day, or as needed.

High amounts of Alpha Lipoic Acid may deplete Biotin levels, therefore, 1-2 Montiff B-Complete or B-Long are recommended daily.
